Cloudflare
Austin, TX, USA

October 13, 2021

Hello ,

I am Srimanth Agastyaraju, a Master's in Data Science student at Indiana University Bloomington. I am an avid learner and curious about Machine Learning, cognitive science, and psychology in general. Swimming and graphic design are what I do during my free time.

As a current master's student, I have spent most of my time immersing myself in Data Science and Machine Learning. I am confident in my ability to perform as a Data Science - Intern in Cloudflare due to my extensive education and work experience.

My past work includes digesting the data and output the insights to a user-friendly dashboard, created using Python and SQL. I am currently enrolled in the course Applied Machine Learning, which enables me to further understand the intricacies of ML algorithms. I have also worked with AWS before, where I ran a parse server for a simple social media clone application. My interest in Cloudflare began when I found out that Cloudflare uses lava lamps for seed selection in Pseudo Random Number generators, which is amazing, considering the fact that 10 percent of internet traffic is handled by Cloudflare. I would love to work at Cloudflare and use my abilities at the fullest to help make internet a better place.

I think this position looks both fun and challenging — and a place for me to further my career! If you have a moment, I would love to ask you more questions about the tools you are using and the types of projects I might be running if hired. I would like to thank you for your time and consideration. I look forward to hearing more about Cloudflare and the details of the Data Science - Intern position.

Sincerely,

Srimanth Agastyaraju
