Yext   October 21, 2021
USA.

Hello ,

I am Srimanth Agastyaraju, a Master's in Data Science student at Indiana University Bloomington. I am an avid learner and curious about Machine Learning, cognitive science, and psychology in general. Swimming and graphic design are what I do during my free time.

As a current master's student, I have spent most of my time immersing myself in Data Science and Machine Learning. I am confident in my ability to perform as a Software Engineer Summer Intern in Yext due to my extensive education and work experience.

My past work includes digesting the data and output the insights to a user-friendly dashboard, created using Python and SQL. I am currently enrolled in the course Applied Machine Learning, which enables me to further understand the intricacies of ML algorithms. I have also worked with AWS before, where I ran a parse server for a simple social media clone application. I am also familiar with MEAN/MERN stack application development, due to my previous experience as a Full Stack Developer. I would love to work at Yext and use my abilities at the fullest to help make enterprise space a better place.

I think this position looks both fun and challenging — and a place for me to further my career! If you have a moment, I would love to ask you more questions about the tools you are using and the types of projects I might be running if hired. I would like to thank you for your time and consideration. I look forward to hearing more about Yext and the details of the Software Engineer Summer Intern position.

Sincerely,

Srimanth Agastyaraju
